KIDNEY FUNCTION TEST(KFT)

TEST DESCRIPTION	RESULT	FLAG	REF. RANGE	UNIT
UREA METHOD: UREASE-GLDH	179.57	H	10 - 50	mg/dL
BLOOD UREA NITROGEN (BUN)	83.91	H	7 - 25	mg/dL
CREATININE SERUM METHOD: PICRATE METHOD	3.40	H	0.50 - 1.20	mg/dL
URIC ACID METHOD: ENZYMATIC	7.41	H	2.4 - 7.0	mg/dL
Protein, Total METHOD: BIURET COLORIMETRIC	6.16	L	6.60 - 8.70	g/dl
UREA / CREATININE RATIO	52.81		-	RATIO
BUN / CREATININE	24.68	H	10.0 - 20.0	RATIO
CALCIUM METHOD: ARSENazo III	9.10		8.6 - 10.3	mg/dL
ELECTROLYTES				
SODIUM METHOD: ION SELECTIVE ELECTRODE	138.6		135 - 148	mmol/L
POTASSIUM	4.42		3.5 - 5.50	mmol/L
CHLORIDE	102.5		98 - 109	mmol/L

Interpretation:

Kidney function tests is a collective term for a variety of individual tests and procedures that can be done to evaluate how well the kidneys are functioning. Many conditions can affect the ability of the kidneys to carry out their vital functions. Some lead to a rapid (acute) decline in kidney function others lead to a gradual (chronic) decline in function. Both result in a build up of toxic waste in blood. A number of symptoms may indicate a problem with your kidneys. These include : high blood pressure, blood in urine, frequent urges to urinate, difficulty beginning urination, painful urination, swelling in the hands and feet due to a buildup of fluids in the body. A single symptom may not mean something serious. However, when occurring simultaneously, these symptoms suggest that your kidneys are not working properly. Kidney function tests can help determine the reason. Electrolytes (sodium,potassium,and chloride) are present in the human body and the balancing act of the electrolytes in our bodies is essential for normal function of our cells and organs. There has to be a balance Ionized calcium this test if you have signs of kidney or parathyroid disease.
